All,

This letter needs to go into ATSDR for review this week in order to get it back in time for the June deadline for the Lower Willamette Group to consider it for the Baseline Risk Human Health Risk Assessment for the Portland Harbor Superfund Site. Please have your comments back to me by Wednesday afternoon.

Special area of concern: Should the biomonitoring recommendation be combined with the proposed community outreach campaign? Who should be named as the entity to take the lead on biomonitoring? The Lower Willamette Group?

Note: This document will be quickly followed by a similar health consultation addressed to the general public. Some of the language and recommendations will be modified accordingly. Please feel free to advise me on what those modifications should be for that more public document.

Thank you,

David Farrer
